

VYUHA · Journal · Measure · Master

# Your P&L tells you **what**. Vyuha tells you **why**.

A fully local, offline-first trade journal and analytics cockpit for Indian retail traders. Exact charges. Honest analytics. Zero cloud.

Web [thejesh-k463.github.io/VYUHA-LOG](https://thejesh-k463.github.io/VYUHA-LOG)

Code [github.com/Thejesh-k463/VYUHA-LOG](https://github.com/Thejesh-k463/VYUHA-LOG)

APPLICATION TO RAINMATTER · 2026

# Most Indian traders have no honest record of their own trading.

## The broker shows P&L, not behaviour

Console and order books answer "how much". Nothing answers *why*: which setups, which hours, which mistakes, which instruments, and what the charges actually cost.

## Journals built for the US do not fit India

Global journals are web-hosted subscriptions priced in dollars, with no STT/CTT, stamp duty, GST, exchange and SEBI charges, no Indian tax pack, and no MTF or options-seller workflow.

## Web journals require trust they have not earned

Every existing product asks traders to upload their full trade history to someone else's server. Many traders — rightly — refuse.

Result: the trader who most needs to learn from their record is the one least likely to keep one. Vyuha exists to make the record effortless, exact, and theirs.

# The market is enormous, and the regulator itself says traders need a record.

≈ 22.9 cr

demat accounts in India — CDSL 18.38 cr + NSDL 4.51 cr (May 2026)<sup>1</sup>

1.13 cr

unique individual traders in equity F&O over FY22–FY24<sup>2</sup>; ≈ 96 lakh F&O clients at the top 13 brokers in FY25<sup>3</sup>

93% · 91%

of individual F&O traders lost money (FY22–FY24<sup>2</sup>; FY25<sup>3</sup>) — net losses ₹1.81 lakh cr over three years, ₹1.06 lakh cr in FY25 alone

**What this means for a journal:** SEBI's own finding is that most retail derivatives activity loses money after transaction costs. A journal does not change the odds — it is the instrument that lets a trader see their own costs, behaviour and mistakes. Vyuha makes no claim about outcomes; it makes the record exact.

# A desktop journal that computes the truth and keeps it on the trader's machine.

## Local-first by design

- Windows desktop app. SQLite file in the user's app-data. No account, no cloud, no telemetry — no Vyuha server exists.
- Works fully offline. Backup and restore are one file.
- The core journal — recording, every importer, backups — is free and never gated.

## What ships today (v2.99.97)

- **Import:** 6 auto-detected broker formats (Zerodha, Dhan, Groww, Angel One, Upstox, Paytm Money) + any CSV via a column mapper + 3 broker-API pulls (Kite Connect, Dhan, Angel One SmartAPI).
- **Charges engine:** STT/CTT, stamp duty, GST, exchange & SEBI charges from a broker × segment × exchange rate table — within 0.69% of a real broker report across 92 verified rows.
- **Analytics:** expectancy, R-multiples, setups, mistakes, time-of-day, sector and theme lenses, options-seller journal, risk, staged positions, MTF.
- **Tax pack:** FY-wise P&L, STCG/LTCG, speculative vs non-speculative, ITR-schedule export.

Index & stock options

Intraday

Delivery

Equity MTF · 10,501 margins across 7 brokers

MCX commodities

# Dashboard — equity curve, daily calendar, the numbers that describe a book.

Every figure is computed locally from the trader's own imported trades, net of computed charges. Nine skins, light/dark, print-ready.

Vyuha · local-first trade journal · not investment advice

## Trades ledger and staged positions — the record, exactly as it happened.

**Trades:** saved views, filters, tags, setups and mistakes; legs are additive detail, the parent row always holds the aggregate.

**Staged positions:** scale-in / scale-out with weighted-average pricing, FIFO quantity consumption and R frozen at the first entry.

# Options-seller journal and risk — built for how Indian F&O is actually traded.

**Options journal:** strategies, strikes, expiries and premium captured per position; index and stock options.

**Risk:** position sizing, R-multiples and drawdown against the trader's own capital — never against a fabricated denominator.

# Tax pack and the charges engine — computed, not copied; reconcilable against a contract note.

Tax Summary (informational)

Per financial year — scaffold only.

Pro trial — 7 days left. Everything stays unlocked while you evaluate. Get Vyuha Pro - Activate a key

Informational only — not filing advice. Figures use net (post-charge) realised P&L and a simplified holding-period rule. F&O turnover uses absolute settlement P&L plus option sell premium. Verify with a qualified tax professional before filing.

Per financial year

CSV XLSX

| FY      | STCG (EQUITY) | LTCG (EQUITY) | INTRADAY SPECULATIVE | F&O BUSINESS | F&O TURNOVER | CHARGES | NET REALISED |
|---------|---------------|---------------|----------------------|--------------|--------------|---------|--------------|
| 2026-27 | ₹18,682       | ₹0            | -₹56,547             | -₹1,835      | ₹9,308       | ₹11,432 | -₹39,701     |

Capital-gains tax & set-off (informational)

CSV XLSX rates change 2024-07-23

| FY      | TAXABLE STCG | TAXABLE LTCG | CAP-GAINS TAX DUE | SPECULATIVE (BIZ) | F&O NON-SPEC (BIZ) | B/F LOSS USED | LOSS CARRIED OUT |
|---------|--------------|--------------|-------------------|-------------------|--------------------|---------------|------------------|
| 2026-27 | ₹16,847      | ₹0           | ₹3,369            | ₹0                | ₹0                 | —             | ₹56,547          |

Dividend income & TDS (informational)

10% above ₹5,000/company/FY

No dividend ledger entries yet

Post one via a Corporate Action.

Rates by sell date: before 2024-07-23 — STCG 15%, LTCG 10%, ₹1L annual LTCG exemption, onlier — STCG 20%, LTCG 12.5%, ₹1.25L exemption. A financial year straddling the turnover uses each trade's own date-based rate, gain-weighted into a single FY rate for the set-off calculation — an approximation for that transition year; verify the exact split against the official ITR utility or a CA. Set-off/short-term capital loss offsets STCG then LTCG; long-term capital loss offsets LTCG only; a speculative (intraday equity) loss can only offset speculative gains, this year or carried forward up to 4 years; a non-speculative (F&O) loss can offset any other gain in the same year (including capital gains) but, once carried forward (up to 8 years) only against future business income. Speculative/F&O columns are business income taxed at your income-tax slab rate — not

**Tax pack:** FY-wise realised P&L, STCG/LTCG, speculative vs non-speculative, ITR schedule export — blank where a figure cannot be derived, never a 0.

| Vyuha           | India  | Annual ₹9,999/yr · Lifetime ₹29,999 once | ₹9,999/yr — or ₹29,999 ever    | Your computer only — no server exists | 6 auto-detected parsers + column mapper + 3 broker-API pulls | Computes STT/CTT, stamp duty, GST, exchange & SEBI charges from configurable rates | Core journal never gated — no trade or account caps |

Every cell read from the named product's public pages on 2026-08-15; ₹ conversions at ≈ ₹88/USD are approximate. † Pricing from third-party 2026 reviews — official page unreachable. "Not stated" means we could not verify it, not that the feature is absent. The same table ships on the Vyuha pricing page.

## Six claims — each is architecture or arithmetic, verifiable by reading the product. None is a promise about results.

### Three-year cost is a subtraction, not a subscription

Lifetime is ₹29,999 once. Three years of the global journals runs  $\approx$  ₹47,000–95,000 at their current prices.

### Your data lives on your machine

There is no Vyuha server to send it to. Every competitor is a web app with a login; Vyuha is a desktop app with a file.

### The only lifetime licence in the table

Every competitor listed is subscription-only. Vyuha is the one product you can stop paying for and keep.

### Indian statutory charges are computed, not copied

STT/CTT, stamp duty, GST, exchange and SEBI charges from a broker  $\times$  segment  $\times$  exchange rate table — within 0.69% of a real broker report across 92 verified rows. Parsing charges a broker already reported is not computing them.

### The core journal is never metered

Recording trades, every importer, backups — free forever, no monthly trade cap, no account cap. Free tiers elsewhere meter trades, executions or accounts.

### Works with no internet at all

Journal on a train, in a dealing room, anywhere — the app never needs a connection to record or analyse.

# Shipped, tested, and in traders' hands — a product, not a prototype.

## 57

tagged releases (v1 → v2.99.97), Windows installer with a signed in-app updater

## 1,756

unit tests · 45 Playwright e2e flows · 13 of 13 load tests · CI runs typecheck, lint, tests and the production build on every push

## 6 + 3

broker formats auto-detected + broker-API pulls; 10,501 MTF margins across 7 brokers bundled

### Go-to-market so far

- Landing page live — [thejesh-k463.github.io/VYUHA-LOG](https://thejesh-k463.github.io/VYUHA-LOG) (features, screenshots, pricing, comparison table).
- First paid licences issued — [[N licences]] to date (owner to fill before upload).
- Creator outreach under way: review keys for Indian trading educators and YouTubers; no commission, no script.

### Engineering posture

- Money stored as integer paise; charge rates live only in a configurable table; pure analytics modules with no DB and no UI, exhaustively unit-tested.
- Broker parsers must see the broker's name before claiming a file — a cross-broker refusal matrix is pinned in tests.
- Restore leaves the journal intact on any failure; account isolation is asserted against the schema.

## Free core journal, paid analytics. Same reasoning as free equity delivery.

₹0

Core journal — recording, every importer, backups.  
Free forever, never metered, never gated.

₹9,999/yr

Pro — analytics, reports, tax pack, risk. Launch price;  
list ₹13,000/yr from 2027-01-01.

₹29,999

Lifetime — pay once, keep forever, all future  
updates. Launch price; list ₹35,999 from 2027-01-01.

### How a sale works today

- Every "Get Pro / Get Lifetime" button opens a WhatsApp checkout (+91 73936 73714) with a pre-filled message; a licence key is issued by hand.
- Offline licence file — no licence server, no phone-home; a signed revocation list ships with the updater.
- Next: a payment page, then in-app checkout.

### Distribution

- Creators and trading educators receive review keys — honest review, no commission, no script.
- Zerodha traders are already the largest import source — via Console exports and their own Kite Connect apps.
- Basic forecast: **[[owner to fill — units × price, no invented figures]]**

# Make the Zerodha → Vyuha path one consent. Optionally, back the build.

## 1 · Partnership (the primary ask)

- A **consent-based, read-only** data path from Zerodha to Vyuha — a Kite Connect read-scope partner app, or a signed Console export.
- Data moves Zerodha → trader's machine and nowhere else. We do not want a copy; no orders, no writes.
- Charges are computed, not copied — the trader can reconcile Vyuha against your contract note.
- Today Zerodha traders do this by hand (download a file, or register and pay for a Kite Connect app). We are asking to make that one click.

## 2 · Optional pre-seed

Raise: **[[₹ amount]]** · Structure: **[[owner to fill]]**

### What it funds, in order:

- Broker integrations beyond file import — starting with the Zerodha read path above, then Dhan / Angel One parity.
- Payment page and in-app checkout; onboarding for first-week retention.
- Later: macOS and a web build (Windows-only today; macOS is not sold).

# Built solo, end to end — product, engine, desktop shell, tests, docs and sales.

**[[YOUR NAME]]** — founder & sole engineer

**[[one line: background, years trading / building, city]]**

- Wrote every line: Next.js + Tauri desktop app, SQLite, the charges engine, parsers for six brokers, 1,756 unit tests and 45 e2e flows.
- Ships from a public repo with CI on every push; 57 tagged releases.
